## How to connect chromecast to speaker

Fluance Ai40 Powered Bookshelf Speakers pair great with Chromecast Audio™. To connect the two, follow these steps: Plug the Chromecast Audio™ into power. Using the included 3.5mm Aux to RCA cable, connect RCA inputs on the active speaker to the 3.5mm output on the Chromecast Audio™. Select the RCA input on the active speaker using either the remote, or input selection button. Stream your music from the device to the Chromecast Audio™. ©2018 Google LLC All rights reserved. Chromecast Audio is a trademark of Google LLC. Can't wait to get casting? Get started with these simple steps: Step 1. Plug Chromecast Audio into your speaker using the audio cable Then connect the USB power cable to your Chromecast Audio and plug the other end into a power outlet using the included power supply. Note: Only use the provided AC adapter. Step 2. Download the Google Home app On your phone or tablet, download the latest version of the Google Home app available on Android or iOS. Step 3. Set up Chromecast Audio Follow these simple Chromecast Audio setup instructions. Step 4. Enjoy your music! Cast music, radio channels, and podcasts from your mobile device, tablet or laptop to your speakers. Mac OS and OS X are registered trademarks of Apple Inc. Windows is a registered trademark of Microsoft Inc. iOS is a registered trademark of Cisco Inc. The Netflix logo is a trademark of Netflix, Inc. Netflix is available in certain countries. More information at www.netflix.com. Was this helpful?How can we improve it? Google's Chromecast is one of our favorite ways to watch movies, TV shows, and other content straight from your phone, tablet, or laptop. Instead of having to fuss around with a remote and an interface on your television, Chromecast allows you to beam content directly from your device through the web from nearly any Android (and some iOS) application, including Netflix, Hulu, YouTube, and Google Play Movies. Since everything you play is straight from your phone, you don't have to worry about dealing with menu systems and other services that are difficult to navigate. And with the current generation Chromecast devices only costing \$35, it's one of the cheapest ways to get into streaming videos and music on your devices.If you recently picked up a Chromecast but are having difficulties hearing any sort of sound from your television while watching or listening to your favorite shows and movies, this article is for you.Checking Your Television's SettingsLet's start with some basic sound solutions to kick things off. Technology can be buggy and imperfect, but some fundamental knowledge in troubleshooting can save the day.Ensure the sound issue isn't coming from your television by checking your volume level and testing a different device for sound output (such as a game console or a cable box). Also, make sure that you have enabled the speakers in your television, and you have set your audio output to 'fixed.'Most modern televisions have a built-in option to disable the television speakers in order to use a home theater or surround sound system. You can also try turning off and unplugging your television for a few minutes, as well as resetting its factory settings from the settings menu. Finally, if you're using a stereo system to power the audio side of your home theater, ensure that your audio system isn't malfunctioning.Once you've checked your television, try switching your Chromecast to a different HDMI port.There are a few points that you have to consider checking about your Chromecast:Make sure your Chromecast is plugged into a fully-functioning USB port and is receiving enough power.Your Chromecast is powered by a micro USB cable, plugging it into the TV's built-in USB port won't make it work.The 4K-supported Chromecast Ultra, meanwhile, uses a dedicated AC adapter, which means you might want to try a different outlet in order for it to function properly.Troubleshooting Your ChromecastAfter you've made sure your device is being supplied with enough power to function properly, you can also try to restart your device to shake up any bugs that might be occurring. To do this, follow these steps:Open the Google Home app on your mobile device.Select your device.Tap the Settings cog in the upper right-hand corner.Tap More to view additional settings.Tap Reboot.These steps will reboot your Chromecast, and should fix any issues with both visuals and sounds. Alternatively, you can simply unplug the device from its power source, forcing a reset.If the sound is still an issue from your device, make sure that the volume on your phone is turned up for Chromecast. Though you can control the volume of your Chromecast streams with your standard volume control on your TV remote, you can also control the volume through your mobile device. Just make sure that you have some kind of content playing from your phone or tablet on your Chromecast, and use the volume rocker on your device to increase the volume as you normally would.Alternatively, try to stop the stream from your mobile device and restart the stream. If the sound problem is spawning from the application, restarting the stream will force Chromecast to reload the URL from which it's accessing the video or audio feed.You can also try force closing the application on your device to see if the problem is coming from the app itself as opposed to the Chromecast device or the connection between the app and Chromecast. If you're streaming fromChrome on your Chromebook or another computer, you can use the built-in Chromecast extension to ensure audio is optimized for sound. Tap on the extension in Chrome, select your Chromecast device, and select "Cast this tab (optimize for audio)."Finally, you may want to attempt to factory reset your device. The main method for resetting the device is through using the Google Home app, as we already discussed. To reset your device using the app on your phone, tap on the Device icon inside the app and select the Chromecast device in your app. After opening your device's settings menu, click on the triple-dotted icon inside the settings to select the factory reset option. Google Home will prompt you to ensure that you want to reset your device. Once you confirm your selection, you'll be able to completely reset your device with preferences to test the audio again.If you're still experiencing problems with your Chromecast after trying these solutions, and you've ensured it isn't another piece of A/V equipment in your setup, the next-best step is to contact Google for a warranty replacement.Fixing Chromecast Audio DevicesIt is also best to mention some Chromecast Audio-specific tips for fixing your audio streams. The Chromecast Audio is less popular than its older, video-friendly brother, but it's a no less interesting device. This can be great for those who have excellent sound systems and are looking for something that functions better than a Bluetooth device.If in any case, you are having any trouble with your Chromecast Audio device, here are some tips that might help.First, we need to dive back into the settings menu of your device in Google Home. Open your Chromecast Audio settings as described in our previous section and find the Sounds section. Unlike a traditional Chromecast device, the Chromecast Audio provides you with a new, never-before-seen setting here: full dynamic range. If you're unsure about whether or not you want to enable this setting, then you should leave it off. Full dynamic range is designed for premium audio hardware, like Hi-Fi audio systems and AV receivers. If you're trying to pump sound through a \$30 pair of computer speakers from Amazon, this setting can actually cause distortion and improper volume increases on your device. If you're having difficulty listening to your music, ensure this setting is disabled.If you're still experiencing issues with sound on your Chromecast Audio, check that the 3.5mm cable used by the device is working properly. Unlike typical Chromecasts, the Chromecast Audio uses a modular, analog 3.5mm jack and cable that can be damaged. However, this is typically easy to replace. Ensure that the cable is pushed into both your receiver or speaker and the Chromecast Audio unit. It would also be best to try testing the unit with a different aux cable. If you can't get any sound out of the device, you may need to consider replacing the unit, as the 3.5mm jack may be dead or damaged.Frequently Asked Questions My sound still isn't working. What else can I do? If you've tried the methods above and your Chromecast sound still isn't working you can reach out to the Chromecast Support team with this link.Some issues are rare or device-specific so you may need personalized help which can be found at the link above. Like most technology, Google's Chromecast has its issues, including occasional hiccups and glitches when streaming media. Typically, most of these issues can be fixed by simply turning your device off and on, or by switching the USB port powering your Chromecast, but of course, these problems can often have all sorts of causes and fixes, so keep trying our solutions above until you've solved the problem. You can do a lot with your Chromecast once you get it working properly, so let us know which fixes worked for you in the comments below. The Google Home is a great device for linking up all of the smart devices in your home to one system. One such smart device you can connect to is a Chromecast, or Chromecast -capable TV.The ability to do so is enormously convenient, as Chromecast devices allow you to stream dozens of video and audio apps, such as YouTube, Netflix , or Spotify, directly from your mobile device or tablet to your TV.Linking a Chromecast to your Google Home allows you to start streaming with just the sound of your voice.In order to perform any of these actions, you'll need a TV with a Chromecast either built in, or plugged into one of the HDMI ports, and of course, a Google Home device. Check out the products mentioned in this article:Google Home (From \$99.99 at Best Buy) Google Chromcast 4k (From \$69.99 at Best Buy)How to connect a Google Home to your TV using Chromecast Connecting to a Chromecast that's already set upTo do this, you'll need to have a mobile device or tablet with the Google Home app downloaded.1. Make sure the mobile device or tablet you're using is connected to the same Wi-Fi network as your Google Home and your Chromecast, and make sure the TV is on and set to the right input for the Chromecast.2. Open the Google Home app on your mobile device.3. On the app's home screen, tap the device you want to link — in this case, your TV. Select TV under "Nearby Devices." Melanie Weir/Business Insider 4. Open Settings (the gear-shaped button in the upper right hand corner), then tap "Add to a home." Select what home you'll be adding to. In the Settings menu, tap "Add to a home." Melanie Weir/Business Insider 5. Tap "Next," then choose the room your TV is in. Your TV should now appear on your home screen, under the name of the room you assigned it to. Select the room that your TV is in. Melanie Weir/Business Insider Your Google Home now recognizes your TV. Connecting to a new Chromecast.1. Make sure the mobile device or tablet you're using is connected to the same Wi-Fi as your Google Home, and make sure your Chromecast is connected to the TV.2. Open the Google Home app.3. Tap "Add," then "Set up device," and finally "Set up new devices in your home." Tap "Set up device." Melanie Weir/Business Insider 4. Select which home you want to add the Chromecast to, then tap "Next." Select the name of your Google Home. Melanie Weir/Business Insider 5. The app will take a moment to look for devices. After that, you should be asked what sort of device you want to set up — in this case, you'll want to select the TV option. Tap it, then tap "Next." Select the device you want to set up. Melanie Weir/Business Insider 6. Both the TV and your mobile device should now show a code. Make sure that the code you see on the TV is the same as the one on your mobile device. If it is, tap "Yes." Make sure your device and the TV show the same code. Melanie Weir/Business Insider 7. You'll be asked if you want to send data from your TV to Google. You can pick yes or no.8. Tap the name of the room that your TV is in, then tap "Next."9. Tap the Wi-Fi network you want to connect your TV to, then tap "Next." Select your Wi-Fi network. Melanie Weir/Business Insider 10. Tap "Continue." 11. Choose what sort of video services you want to have — that's things like YouTube, Netflix, and Hulu — and then tap "Next." You'll need to enter your username and password for each streaming service you want to link. Melamie Weir/Business Insider 12. Tap "Next" twice to finish setup.13. If you'd like to, you can also now name your TV. Select the device from the Google Home App and tap the Settings button — the gear-shaped icon.14. Tap "Name," then enter your desired name. Name your new TV. Melanie Weir/Business Insider If you get a message that reads "Error when linking device," you should factory reset your Chromecast and try again.
