This is an equation in decimal numbers, with the most precise number having 2 decimal places. Therefore, multiply both sides of the equation with  $10^2 = 100$ , this will convert this decimal equation to an equivalent equation in whole numbers, therefore:

$$100(-0.85t - 0.85t - 3.9) = 100(-8.15)$$

**Simplify:**

$$-85t - 85t - 390 = -815$$

$$-170t - 390 = -815$$

Add 390 on both sides of the equation to isolate the variable on one side of the equation:

$$-170t = -815 + 390$$

**Simplify:**

$$-170t = -425$$

Divide both sides of the equation with  $-170$  to evaluate the variable:

$$t = \frac{-425}{-170}$$

Divide out the common factor  $-85$  to simplify:

$$t = \frac{5}{2}$$

However, teachers and parents who homeschool follow a curriculum. Score: 0% Rank: Correct Answer: Start Quiz >> @mathematicsprof/Twitter Some students love math — others not so much. Giving students some control over how they learn allows them to adapt and incorporate their strengths, and it also conveys your belief in their ability. As a result, some may try to get away with only doing the bare minimum to get a passing grade. In short, that means some problems can be solved in more than one way. Be sure to encourage curiosity and questions at all times, especially when you're helping them with new or challenging concepts.Raise the BarOkay, every student won't fall in love with math, even after you build their confidence and show them they can learn it. While it's certainly true that some students understand math concepts more quickly than others, everyone can learn math with the right techniques and tools. Reward your student as you go with simple but cool treats like setting up a math game to play on a computer or mobile device in place of a regular study session. If you're not sure where to start, take a look at these time-tested ways to help students with math.Build ConfidenceSome students who struggle to understand certain math concepts become discouraged and start believing that math simply isn't for them because they aren't any good at it. That might work in a history class, but for math, it's critical to really understand the mathematical concepts to achieve long-term success. It's critical to be vigilant about what you say when it comes to talking about math and helping them with it. With a positive approach, you might be surprised to see how much progress your child starts to make.@MathCoachCorner/Twitter Personalize Math AssignmentsNumbers sometimes work in very interesting ways. If you don't encourage understanding over memorization from the beginning, students could find themselves on shaky foundations as the math gets progressively harder.@MathCoachCorner/Twitter Reward ProgressNo matter what subject you're working on with your child or student, it's important to reward progress. They will enjoy it a lot more than a certificate or badge.@MathCoachCorner/Twitter Collaborate with Teachers and ParentsWhether you're a teacher or a parent, it's always a good idea to collaborate with each other. @MathCoachCorner/Twitter Additionally, letting their curiosity guide them gives them a chance to discover their own passions for the particular subjects they may enjoy most. They feel that way because they don't understand all the ways math relates to daily life in the real world — so show them! Applying equations, formulas and geometry to common tasks they can see and participate in helps students understand just how important math is in our lives.@mathematicsprof/Twitter Be PositiveKids' brains are like sponges, and they absorb all kinds of remarks and suggestions from adults — both positive and negative. For example, if students are struggling to understand how a fraction with a larger number on bottom could be smaller than a fraction with a smaller number on bottom, introduce some real-life items — like maybe large cookies — and let them explore the differences between dividing something into 10 pieces versus dividing it into four pieces. Work to build confidence from the outset — perhaps with a fun game that reinforces beginning math concepts — to ensure you take that fundamental first step to helping your child learn and succeed.@MathCoachCorner/Twitter Big ideas in math tend to naturally inspire curiosity, but curiosity is a valuable tool even for basic concepts. That makes math important for more than just a grade on a report card. Don't forget to include plenty of time for questions and allow them time to truly understand the concepts before moving on to the next topic.@MathCoachCorner/Twitter Apply Math to Real-World ScenariosWhen you talk to students, it becomes clear that one of the key problems with math for many of them is that it just seems too abstract for them. Even if you start to feel frustrated yourself, take a short break to relax and then seek guidance from online sources or another person to help you figure it out. Don't let them do it! Instead, raise the bar with even bigger challenges to send a powerful signal that they are always expected to do their best.@mathematicsprof/Twitter Plan in AdvanceFor most parents, students bring home specific items as homework, and they simply need to be prepared to help with what they're given. This will keep you on track and help you get past hurdles quickly. In fact, some students find math to be difficult and dislike it so much that they do everything they can to avoid it. Teachers should keep parents informed about exactly what they've been doing in class, while parents — who are generally the ones called on to help out at home on a more one-on-one basis — should seek guidance from teachers and inform them of any problem areas that are particularly challenging.@mathematicsprof/Twitter MORE FROM QUESTIONSANSWERED.NET When that's the case, it's vital to look at the topics students need to know for their exams, and it takes some advance planning to make sure you cover all of them in detail. Above all, stay positive and don't express a negative attitude that your child is likely to mimic. Whether you're a parent helping your child at home or a teacher in the classroom, tackling the process with the right teaching methods can make a huge difference. In the sports world, this often comes in the form of medals or trophies. For example, instead of just giving them an exercise or worksheet to complete, you could prepare several different exercises and let them choose what they want to do. They are far more likely to be enthusiastic about a task they gave themselves.@memesxmoney/Twitter Prioritize Understanding, Not MemorizationIn the academic world, too much emphasis is sometimes placed on memorizing information for exams. Math may feel a little abstract when they're young, but it involves skills they will need in life long after they're out of school. Don't put off giving them rewards for their hard work! They shouldn't have to wait until they achieve big things like getting A's on report cards and outstanding test scores.

Apr 19, 2021 · You will find the Big Ideas Math Geometry Answers and attempt the exam with utmost confidence. Big Ideas Math Book Geometry Answer Key Chapter 2 Reasoning and Proofs Become proficient in the concepts of BIM Geometry Chapter 2 Reasoning and Proofs by referring to the quick links available. Feb 16, 2021 · This Big Ideas Math Book Algebra 2 Ch 3 Answers Key is prepared as per the guidelines of the Common core curriculum and explained in a simple manner. So, have a glance at these exercise questions and get an in-depth knowledge of the subject & perform all the exam with full confidence. Big Ideas Math Answer Key Grade K to High School Common Core 2019 Curriculum Pdf. If you are searching for Big Ideas Math Textbook Solutions for any grades then our library is the biggest & a one-stop destination for all elementary school to High school students.
