Please help to improve it by replacing them with more appropriate quotes to reliable, independent and third party sources. (July 2020) (Learn how and when to remove this message template)

arcserveScreenshot of Arcserve UDP ConsoleAuthor original arcserveInitial February Release 1990, 31st years ago [1990-02]Establishment release Arcserve Data Protection 8.1 [Agosto 23, 2021, 4 months ago [2] Operating system Windows, Linux, Unix, MacAvailable in 10 languages[3]List of English, Chinese (Simplified), Chinese (Traditional), French, German, Italian, Japanese, Korean, Portuguese, Spanish TypeData Protection com Arcserve is a provider of data protection, replication and recovery solutions[buzzword] for companies and mid-market. Arcserve was founded in the 1983 as Cheyenne Software[4]. The software supplier CA Technologies, then known as Computer Associates, purchased Cheyenne in 1996 and continued to develop and market the product Arcserve with the same brand. [5] Arcserve history was initially developed as a product used to backup other software programs and to ensure that data in the network was not lost. The main function of the first release was to automatically copy all information in the system so as to avoid problems such as power cuts and equipment failures destroying or deleting the system. In the early 1990s, Arcserve became the leading product of Cheyenne with massive sales growth[6]. In the 1993 Cheyenne published an improved version of its main program Arcserve and began distribution through Original Equipment Manufacturers During the mid-1990s, Cheyenne continued to release a range of custom-made new Arcserve products for different market segments such as Macintosh and Windows. [7] Windows. [7] CA Technologies, then known as Computer Associates, acquired Cheyenne in 1996 and continued to develop and market the product Arcserve with the same brand[5]. In August 2014, Arcserve became an independent company when Merlin Equity Partners acquired the business from CA Technologies. They released their first product and called it Arcserve Unified Data Protection (UDP). Arcserve provides some of the largest independent software manufacturers (ISV) developed software backup products on the market[8] and supports a wide range of platforms and applications. Arcserve Unified Data Protection (UDP) is offered as fully integrated software, set-and-forget virtual or physical devices and Arcserve (r) Cloud. [9] April 26th 2017, Arcserve announced the acquisition of email storage technology, now called Arcserve UDP Archiving. In July 2017 Arcserve announced the acquisition of Buzzword, which now offers DRaaS and BaaS direct-to-cloud with Arcserve UDP Cloud Direct. [10] On the 17th of March 2021, Arcserve announces that it has received regulatory approval to complete the merger with StorageCraft. Recovered by " Known positions of port and vulnerability Threat / Application / Port search. Port (s) Protocol Service Details Source 1900 TCP, UDP SSDP, UPNP IANA registered by Microsoft for SSDP (Simple Service Discovery Protocol) ... Upnp Discovery / SSDP, is a service that works by default on WinXP and creates a security vulnerability immediately exploitable for any system connected to the network. Filtering this door proactively prevents XP systems to be compromised remote from harmful or intruder worms. See UPNP vulnerabilities (Port 5000). Xerox Phaser 8400 allows remote attackers to cause a service rejection (reboot) via an empty UDP package to Port 1900. References: [CVE-2008-3571], [BID-30522] Multiple buffer trabocchi in LGServer. EXE in CA BrightStar ARCserve Backup for laptop and desktops R11. 0 up to R11. 1 SP1, Mobile R4 backup. 0, Desktop and Business Protection Suite R2, and Desktop Management Suite (DMS) R11. 0 and R11. 1 allows remote attackers to perform arbitrary code via handwriting packages at the TCP port 1900 or 2200. References: [CVE-2007-0449] Stack based Buffer trap in the universal plug and play service (UPnP) in D-link 524, 604 broadband router, 624, D-Link of 784, WBR-1310 Wireless G Router, and EBR-2310 Ethernet Broadband Router allows remote attackers to execute code Arbitrary through a long sequence M-search to UDP Port 1900. References: [CVE-2006-3687] [BID-19006] [Second-21081] [OSVDB-27333] Swisscom Internet-Box is vulnerable to an overflow. Bearing bearing from caused by inaccurate checks carried out by the UPnP LAN Service. Sending a simple UDP package to port 1900, a remote attacker can buffer a buffer and execute arbitrary code on the device. References: [CVE-2018-15 596], [XFDB-154 437] A problem has been detected on D-Link DIR-816L device 2. x before 1.10b04Beta02. Universal Plug and Play (UPnP) is enabled by default on port 1900. A misunderstood user can inject commands by injecting a payload into the Search Target (ST) field of the M-SEARCH SSDP package discover. References: [CVE-2020-15 893] This vulnerability allows attackers adjacent to the network to execute arbitrary code on the relevant installations of the NETGEAR R6400 and R6700 firmware versions 1.0 routers. 4.98 version. Authentication is not necessary to exploit this vulnerability. The specific defect exists within the upnpd service, which by default is listening on UDP port 1900. An MX header field created in an SSDP message can trigger an overflow of a buffer based on fixed length stacks. A misunderstood user can use this vulnerability to execute code in the root context. It was ZDI-CAN-11 851. References: [CVE-2021-27 239] SG 1900 udp Microsoft SSDP Allows the detection of UPnP devices (official) Wikipedia 19003776.7777 applications udp Xbox 360 Media Center Portforward 1900 tcp, udp upnp Universal PnP Nmap 1900 tcp, udp ssdp SSDP IANA 5 record found SG security scan: port 1900 jump to: Related ports: 2200 to 2869 to 5000 to 32 400 to return to SG Ports External Resources SANS Internet Storm Center: port 1900 Note: The port numbers in the computer network represent the communication endpoints. The doors are whole with 16-bit unsigned (0-65 535) which identify a specific process or network service. IANA is responsible for the resources of the Internet Protocol, including the registration of the port numbers commonly used for the most famous Internet services. Well known ports: from 0 to 1023. Registered ports: 1024 to 49 151. Dynamic/private: from 49 152 to 65 TCP ports use the Transmission Control Protocol, the most widely used protocol on the Internet and any TCP/IP network. TCP allows two hosts to establish a connection and exchange data flows. TCP and the packages are delivered in the same order in which they were sent. Guaranteed communication/delivery is the fundamental difference between TCP and UDP. UDP ports use the Datagram protocol. Like TCP, UDP is used in combination with Internet Protocol (IP) and makes it easy to transfer datagrams from one computer to applications on another computer, but unlike TCP, UDP is offline and does not guarantee reliable communication; it is up to the application that received the message to process any errors and verify the correct delivery. UDP is often used with time-sensitive applications, such as audio/video streaming and real-time gaming, where downloading some packets is preferable to waiting for late data. When troubleshooting unknown open ports, it is helpful to find out exactly which services/processes are listening to them. This can be done in both Windows command prompt and Linux variants using the "netstat -an" command. It is also recommended to run multiple anti-virus/anti-malware scans to rule out the possibility of malicious software being active. For more detailed and personalized help please use our forums. Please use the "Add Comment" button below to provide more information or comments on the 1900 door.
