Book Descriptions:

Deskjet 610Cl Manual

Manual is in.pdf format for easy download containing do it userself manual and tutorial setup. Manual is designed to help you fix minor issues withHP DESKJET 610CL, like fixing, setting up, Warranty, Trouble shooting steps and operating instructions. Please read this manual carefully before operating.Retain it for future reference.Record model number and serial number of the set.See the label attached on the back cover and quote this information to your dealer when you require service. This instruction from HP will surely help you how to replace cartridge. Thank you. If it is blinking and the power light is steady and if just installed a print cartridge, make sure the cartridge is securely snapped into the printer with the arrow aligned with the dots on the top of the printer cartridge cradle. Close the top cover of the printer if it is open. Check the lower IN tray to make sure it contains paper and that the paper is correctly loaded in the tray. Press resume to clear the error condition. Then check your computer screen for any reported error message and corrective action instructions. If the resume and power lights are blinking press the power button to turn off the printer. At the computer, cancel any documents awaiting printing. Then press power button again to turn on computer. Good luck from Lady Isobel.You need a USB to Centronics Printer Cable.Uninstall all the printer driver for this Printer and then restart. After that reinstall all the drivers.If not use step 2 and find the driver you need.This would happen for example if you have loaded A4 paper but your driver is set to print on letter format. Letter is wider than A4 by 6mm and while the printer is trying to print near to the right side, assuming the paper is wider, part of the ink goes on the paper support. Other reason may be the paper size in the document is set to be larger than the loaded paper format and driver prints only what can be fit on the loaded paper.http://gumilla.org/userfiles/bosch-premium-vacuum-manual.xml

Remove the power cord from the back of the printer.Clean the face and edges of the face cartridges with the swab. Reinsert the print cartridges. Connect the power cord at the backside of the printer. If you are using the sheet feeder, it will scan all pages and create one file with them all. Rinse and repeat until youve scanned all pages then answer NO.Im getting an error message like this.Ink was low so I put in a new Hp 662 black in But, message wont come off Answer questions, earn points and help others. Did a search here but didnt see anything similar. Earlier today when I tried to print, the 610 pulled the paper in part way, then just stopped, and eventually ejected a blank sheet. Ive shut down both computer and printer multiple times. I cleaned the cartridge area per the user manual. There appears to be ink in the cartridges and I just tried to print a color doc to see if perhaps the black ink was out, but the same result of blank pages. The HP online manual is no help. What do you think is wrong. Many thanks.Would deleting the print drivers and reinstalling them help. Thanks for any suggestions in advance.HP Deskjet 600, 600c, 610c, 630c, 632c, 640c, 642c, 648c, 660c, 670c, 680c, and 690c series printers Running a selftest Turn the printer on. Press and hold the RESUME button until the printer starts printing. Release the RESUME button. Running a cleantest Turn the printer on. Press and hold the POWER button. Press the RESUME button seven times. Release the POWER button. Running a diagnostictest Regular Turn the printer on. Press the RESUME button five times. Extended Turn the printer on. Press the RESUME button twelve times. Release the POWER button. I turn the printer off and the paper ejected and the printer turned off. So, I removed the ink cartridges that were half full and put them in a zipper bag, disconnected the printer,and now it sits on a closet shelf. I wish it could work again but thats probably just a dream. Mark

Sure the yellow light is blinking, but is the green light on or off. The status of all the lights is important when determining the cause of the problem, and if for any reason more than one light is flashing, then we would need to know if they are in sync, or alternating. STAfter that, when I turned the printer on to print something, it would make the ususal noises. Then when I tried to print something, the paper would be taken in part way and stop and the yellow light blinked and an error message came up saying that the document failed to print. When I turned the printer off the paper came out and the lights went out. Even trying to print a test page failed, the paper went in part way and stopped. A box popped up on screen saying the document failed to print. Turning off the printer made the paper come out and the lights go out. I did everything that HP said on their website. Its a nice printer that has never failed me untill recently. Mark FWithout information I cant help. STWhen I try to print something the green light flashes as the paper is pulled in part way, then it stops pulling the paper in, the green light stops blinking and the yellow light blinks. I turn the printer off, the paper comes out and the printer goes off. So the green and yellow lights dont blink at the same time. I hope thats what you needed to know as it sure would be nice to get this working again. Mark FSo pretty please tell me, when the printer stops is the green light on or off ST You said that if the lights are blinking, you would need to know if they are in sync or alternating. The are not. The green light is steady untill I try to print something. Then it starts blinking and the paper is pulled in part way. Then the green light stops blinking but it stays on and the yellow light, that was off, starts blinking. A document failed to print error message comes up, and I then click the onscreen box to cancel. Then I turn off the printer and the paper comes out and the lights go out.

So, the green light is always on when the printer is on, it only blinks as it takes up paper into the printer. Then it remains on but stops blinking and the yellow light blinks. The yellow light also blinks when I click the box to align the cartidges. And when I open the top, the yellow ligh blinks and then the carriage moves to the center, Ive checked and checked to make sure the cartidges are seated properly. I removed the paper tray, checked the position of the slider arm and made sure the rollers were black and the flat cork piece was flat when HP customer support had me checking many things like that. When it still wouldnt print, I was asked if I would be happier with a new printer. But that wont be in my budget untill later this year. So, the Green light is always on and steady unless its trying to print. When it fails, the green light goes back to steady and the yellow light flashes just like it does when I try to align the printer heads or open the lid. Im sorry if I was unclear about what info you needed, I hope Ive given you enough.And, I do appreciate the online help I get from sites like this. Mark FAt any rate Power on and Resume flashing indicates a cartridge error. Unplug power from printer. Wait 5 seconds. Plug printer in. Wait 5 seconds. Push power button, if it didnt turn on when you plugged it in. If printer initializes and ready light comes on attempt to print diagnostic tests. If the error recurs, then open the top cover, when the cartridges move to the center reseat them, then close the top cover. Do the cartridges stay in the center, or do they move back to the right side of the printerI disconnected the printer cable, disconnected the power cable for 5 seconds, reconnected it, held power button while pressing resume 5 times then released power button yellow light kept blinking, did the same pressing resume 12 times yellow light still kept blinking. I opened the top and the cartridges moved to the middle.

I closed the top but the cartridges stayed in the middle and yellow light kept on blinking. Mark F. By parts code you can check what other devices it is used. You can print your Parts List or export to Excel to further work with it. We only help you to create your parts list for request from your suppliers. Add your headers and comments. Use saved Parts Lists as templates to create new lists. Change the contents of the old list and save it as new. You can add, delete list items, change headers, comments and quantity of spare parts.
