All I needed was a way to edit and write into my works in progress while traveling and during my other downtime this app is just perfect for that. I work on a document on my computer, save it, sync Documents to Go with my iPhone, edit and write when I can, then sync when I get back. I used to do the same thing using Documents to Go on the Palm Treo and was lamenting that I hadn't found something with the same functionality for iPhone then someone suggested Documents to Go for iPhone. Without this app, I would need to lug my laptop around everywhere, and then I probably still wouldn't get the same amount of editing and writing done on the road. I love this app, but it's not perfect. Every now and then I get annoyed by needing to hit multiple buttons to get to something I want for instance, the keyboard and it is a little annoying that it does not sync with a folder inside a folder that it is set to sync to. When I'm working on a long document, it doesn't save my place when I close the app and reopen it, so I lose some time finding my place again. Like I said, I am really only using this app for editing Word documents, and it's pretty great for that. Maybe some future updates will help I hope so. But I really do not understand their lack of a support feature, unless of course you want to pay for it for such a well-known company it appears that iPhone owners are being treated as unimportant, DocTo Go really needs to rethink their support policy. I need to make a retraction I judged this app prematurely, it does what it says it will and does it very well, it has been well worth the wait. Maybe the next update could include these PLEASE. When this happens I will rate it a 5 star app. And of course the ability to edit Excel spreadsheets. So when I found this app I

was genuinely excited and rather impressed despite the steep cost, when compared to other apps. The wireless syncing was great and easy and I could use my iPhone even more instead of my bulky laptop. http://practicmed.ru/files/caravan_aircraft_man.xml

Just pull out the phone, jot down the notes and be done. But soon thereafter the gleam and shimmer of the app soon faded. Not only does it have many of the functional problems already visited by other reviews, but the desktop application for syncing is one of the most frustrating pieces of software I've ever worked with. Many times I'll come home and go to sync my notes and thoughts gathered through the day only to find the frickn thing won't even launch. It took me some time to figure out that I had to remove it manually, all the way down to left-over register files, and THEN reinstall it in order to get the thing functioning again. Only thing is this is a consistent problem and I have lost many pages of notes and writing due to it. If I had spent 25 dollars on this I don't think I'd be as frustrated as spending 10 to find this problem still consistently plaguing their community. Or call 1800MYAPPLE. There are two ways to do this. See how Dropbox makes syncing files easy. First, you'll download and install the Dropbox desktop app on both computers. Next, you'll use the app to migrate files between computers. Drag and drop these files or folders to the Dropbox folder on your hard drive. The Dropbox icon in the system tray or menu bar will also say Up to date. You should then see the files and folders on both computers. The Dropbox desktop app will then scan the files, and see that they're the same files in your Dropbox account. Stop the download immediately by clicking the Dropbox icon in your system tray Windows or menu bar Mac, and selecting Pause Syncing from the menu. If all of these files are the same as the files in your account online, scanning will finish. However if, in the middle of this process, a file has changed in your account for example, someone else has updated a file in a shared folder, Dropbox will generate a conflicted copy so that both versions of the file are preserved.

If there are folders you don't want taking up space on your computer, you can use selective sync to store them only in the cloud. However, you may need to wait until Dropbox has finished its initial sync of your files before the selective sync option becomes available. You can then copy your nonshared files to the Dropbox folder, and then re-add the shared folders and let them download to your computer. This will prevent Dropbox from generating conflicted copies of files if other people have changed them, as described above. After you sign in to one Dropbox account, we will recognize that you have linked your Dropbox through the settings on the website and invite you to download a separate folder for your other Dropbox account. If you would like to speed up the transfer process and copy your files manually, just follow the same steps above and repeat separately for each folder. Let us know how we can improve Let us know how this article helped Learn more about case conflicts, how to prevent Get the info you need whether you're on mobile, PC, or Mac. By continuing to browse this site, you agree to this use. Learn more You can work with your synced files directly in File Explorer and access your files even when you're offline. Whenever you're online, any changes that you or others make will sync automatically. If you use Microsoft 365 Apps for business, you can also sync files from your SharePoint sites. If you're not using Microsoft 365 Apps for business, see Sync SharePoint files with the OneDrive for Business sync app Groove.exe. If the icon doesn't appear in the notification area, OneDrive might not be running. Click Start, type OneDrive in the search box, and then click OneDrive in the search results. If you want to change the folder location, select Change location this is the best time to make this change. Files OnDemand helps you access all your files in OneDrive without having to download all of them and use storage space on your Windows device. Select Next.

The sync app automatically takes over syncing in the same folder location you were using before. For the OneDrive mobile app, see Troubleshoot OneDrive mobile app problems. OneDrive Admins can also view the OneDrive Tech Community, Help for OneDrive for Admins. OneDrive Admins can

contact Microsoft 365 for business support. While we can't guarantee any specific features or timelines, we will respond to every suggestion that gets at least 500 votes. It sounds like it might be helpful to connect you to one of our Office support agents. Visit uscis.gov for the official USCIS site. Federal government websites often end in .gov or .mil. Before sharing sensitive information, make sure you're on a federal government site. This includes citizens and noncitizens. Both employees and employers or authorized representatives of the employer must complete the form. The employee must also present his or her employer with acceptable documents evidencing identity and employment authorization. The employer must examine the employment eligibility and identity documents an employee presents to determine whether the documents reasonably appear to be genuine and to relate to the employee and record the document information on the Form I-9. The list of acceptable documents can be found on the last page of the form. Employers must retain Form I-9 for a designated period and make it available for inspection by authorized government officers. Employers must have a completed Form I-9 on file for each person on their payroll who is required to complete the form; retain and store Forms I-9 for three years after the date of hire, or for one year after employment is terminated, whichever is later; and make their forms available for inspection if requested by authorized U.S. government officials from the Department of Homeland Security, Department of Labor, or Department of Justice.

Download Instructions Form I-9 is a fillable form, which means you can type your answers directly on the form instead of writing them by hand. To use this fillable feature, download the form and save it to your computer. To complete your Form I-9, you will need the latest version of Adobe Acrobat Reader. You can download Adobe Acrobat Reader for free from the Adobe website. You can open the English or Spanish versions of the form, instructions, and supplements in any browser. Her work has appeared in Mashable, TechRadar, and many more publications. Your iPad can store all your favorite apps and files, making it easy to access important documents wherever you are in the world. But finding and managing your downloaded files can be confusing and unclear. Here are some tips for iPad download management. Unlike PCs and Macs, the iPad has no designated Downloads folder where all downloaded files immediately go. And, the iOS file system isn't as easy to browse as an Android file system. While you have many options, here's how to save files from commonly used apps. Here's how to choose where the file goes. Depending on the file, you can usually tap Save Image for images, Copy to iBooks for PDFs, or Save to Files to save it to the Files app for general use. This app brings together all your files across iCloud so it can also include documents from your Mac or other iOS devices. Remember to check there if you prefer to use a non-Apple-based solution for your file storage. Desk Envy Explained The Deets More Originals Buying Guides QLED vs. OLED TV Which Instant Pot Should You Buy 4K TV Buying Guide Soundbar buying guide Google Home vs. Amazon Echo Laptop Buying Guide MacBook Pro vs MacBook Air Nintendo Switch vs. Switch Lite Which is better. Not only do they have the tools we need, but stacks of photos, files, videos, and other media crammed into it each day.

While media secretly downloads onto our mobile devices, however, a conscious effort is needed to actually find where downloads reside on our phones. It details just where to look and what to do in order to access your downloaded media. Files can be used to store everything from photos to saved GarageBand songs. If you've downloaded something in the past, you're almost certain to find it there. Here's how And if you can't remember the exact name, you can type the first few letters, which prompts the app to suggest likely candidates. Check these categories if you can't find your files using the Downloads category. Scroll down and tap the Downloaded Files card. Alternatively, tap the Browse tab at the app's bottom followed by Downloads on the following screen. Both lead to the same location. Next to this button is a threedot "More" icon presenting a dropdown menu with Sort By and Select All options. Usually, this is the result of a permissions problem stemming from using the Google app to download images. Next, make sure Storage permission is switched on. If

it isn't, downloaded files will continue to be sent to a separate system directory. However, depending on the models and manufacturers involved, the app name may differ. For example, you can find Netflix downloads by opening the Netflix app, tapping the menu icon in the topright of the screen, and selecting My Downloads. This applies to iPhones and Android phones. So if you've downloaded a file through a particular app, try opening that app if you can't find the download in the usual locations. Learn more.I can control my thermostat with my voice, but somehow printers feel just as confusing and unreliable as they were 10 years ago. If your printer is throwing you an error or just ignoring your demands entirely, heres how to troubleshoot the problem so you can get back to work. Your printer may be showing an error message through a series of cryptic flashing, colored lights on the printer itself. It isnt always clear which lights mean what, though, so you may need to check the manual to decode what your printer is saying. If you lost the manual, you can usually download a PDF copy from the manufacturers support page for your printer. Once youve figured out the error—e.g., printer jam or no ink—jump down to the corresponding section of this guide to diagnose it further. And if your printer isnt showing an error, keep reading. Rightclick any old items and clear them to get things chugging again. Alternatively, in Windows, you can restart the print spooler, which will try to print those documents as if they were just added to the queue so you dont have to clear them. There are a few ways to do this, but the easiest is probably from the Command Prompt.Ensure the USB cable is plugged in snugly at both ends, and that the power cable is plugged into the wall. You never know when someone unplugged it to charge their phone without telling you.

If youre trying to print over WiFi, try plugging your computer in via USB to see if that works instead—if it does, you know the problem exists with the WiFi connection and can focus your effort there. Is your printer getting a good enough signal. See if the printer shows up in your routers network list, or try moving the printer closer to the router to see if its just out of range. No joke, my fatherinlaws printer doesnt work unless all the upstairs doors are open, because they impede the alreadyweak WiFi signal. If youve used your computer with multiple printers—say, if you go back and forth between your home and office, or if you just got a new printer at home—Windows may be trying to send documents to the wrong printer. Then, pay close attention to the options that appear—if the dropdown menu shows a different printer than the one you want, click it to select the correct printer before continuing. In some programs, like Google Chrome, you may even need to click See More for a full list of connected printers. But in rare cases, you may need to head to the printer manufacturers website, look up the support page for your model, and download the driver or

software package manually—so if you haven't done so, try that now. Your PC should search for printers on the network, and when it finds the one you're looking for, click on it to add the printer to your list. Now, you should be able to print a document. Sometimes, though, printers are finicky—there may be paper loaded, but if the printer can't grab hold, it's going to think it's empty. Try removing the paper tray, realigning the paper, and sliding it back in. In other instances, there may be some paper jammed in the mechanism. Usually your printer will tell you so, and you just need to open the access panel and pull the crumpled paper out. Again, you may need to refer to your manual if you aren't sure where it opens up.

In some cases, your printer can say there's a paper jam even if you don't see a sheet of paper stuck in the mechanism. When that happens, you may have smaller bits of paper or other residue stuck inside the rollers that you can't see. This means you would have to remove some of those components to clear the problem. If you aren't comfortable doing so, bring it into a PC repair shop for help. First, the print head may be clogged or dirty, and you can clean it out through your printer's built-in cleaning routine which you'll find detailed in the manual. Alternatively, if your printer's heads lie on the ink cartridges themselves—the little copper strip where the ink comes out—you can blot it with a wet paper towel to clean it up. Once ink starts to flow more freely onto the towel, give it a quick dab with a dry paper towel before reinserting the cartridge into the printer. If you have a laser printer, you may be able to get a bit more toner out of the cartridge by shaking it from side to side, then reinserting it. Finally, it's possible your printer just doesn't realize you put in new ink cartridges. Check your printer's manual to see how on your specific model. Remember that certain third-party cartridges may cause problems, too, so try genuine cartridges from the printer manufacturer to see if they work better. Both your printer and your computer can print test pages that may help you narrow down your issue. You can usually run your printer's self-test by pressing a series of buttons as the printer boots up, which you'll find outlined in your printer's manual. If your printer's own test page comes out fine but Windows throws an error, you can be reasonably sure you have a software problem. If the printer can't even print its own test page, then you'll want to focus on repairing the printer rather than driver or software issues. If you're lucky, your printer may even give you a test page with an error code or other information on it you can decipher.
